

A + B Problem

Problem Description

Write a program that reads two integers, A and B, and outputs their sum.

Input Format

- The input consists of a single line containing two integers, A and B, separated by a space.

Output Format

- Output a single integer, which is the sum of A and B.
 - $-10^9 \leq A, B \leq 10^9$
-

Examples

Example 1

Input:

1 2

Output:

3

Example 2

Input:

-5 10

Output:

5

Notes

- Ensure that your program handles large integers within the given constraints.
- The input will always be valid, so no need to handle invalid input cases.
